**I**teuse that. xliij. past my farther mayster  
Laet and. xx. yere before hym his farther  
Johā laet (Whome Jesu pardon) berthe  
myr's hath yerey vnto the profyte of the comyn peo-  
ple calculate and put forth certayn pronostycacions  
nackes/by the which they haue shewed the constellacions of  
the heuens with certayne effectes/opracions/and  
that by the suffraunce of god were to come/to the nēth  
ry man agaynst the same myght kepe and dyspose  
and resyft them to his power. As Ptolomeus recey-  
v. proposicion of the boke of the C. sentences/with  
tours/as Georgius/trapezontus. Johānes pontanus/that  
a prudent astronomer may kepe and defende the comyn people  
fro many inconueniēces and euell effectes comyng to them by  
constellacion of the heuens the which naturall resō also cō-  
fermeth. For an euill comyng which is knowen before/may  
be made lesse or more easer sufferd than that which cometh  
soderynly vnprouyded for. wherfore I haue proposed/not pre-  
sumyng of my parentes/but wylling to accomplissh be and fo-  
lowe to my power /that whiche they before tyme haue often  
shewed me / vnto the profyte & prouyciō of the comyn people.  
And for to furnyshe the same after the noble and true science  
of astronomy thus shall I wyte (as Plato & Aristotle shew-  
eth vs) fy:st certayn foundacions and resons/wherupō this  
pronostication shalbe founded. For all thynges happenyng  
on the erthe dependeth on naturall causes of the bodyes abo-  
ne folowynge: alway Ptolome pryncce of astronomy /leauyng  
Albumazar/Aleabyce/Baly. &c. Whiche hath wyrted erro-  
nyously in dyuers maners. The fy:st and pryncipall foun-  
dacion of this pronostycacion is the eclypse of the sonne past  
in the yere. xxxij. the. xxx. day of Auguste about none/in the.  
xvi. degre of Virgo in the hous of Mercury/which after the  
doctryne of Ptholome. q. lib: 2 Apotelesmaton shal this yere  
folowe his effect. The secong foundacyō shalbe touchyng

8  
formed in the booke of the celestie / whether the said comete is  
comes / all the which other / I haue wrote folowyng  
Ariazagoras / E. moerius / Albimaser / Galy. et cetera.  
Aristoryll also varyeth nat in the boke of Meteorologie.  
Againe Prolome wyrynge that the exaltacion nor mouyng  
of the heuens or some heate hath ben the cause of generacion  
of comets. For Aristorell there wyterh lyke a philosopher  
the moost neresst causes. And Prolome as an astronomer  
wyterh the celestiaall causes generall and perticuler / more  
longer and largelier of the same / but my father hath thereof  
more plainly wyten in yeres past / touching the generacyon  
of comete.

Of the tyme whā the comete shall utter his effecte / and  
whether it shall longe indure.

Consideringe the disposition of the comete in his cours  
with the figure made vpon the tyme that it appered. For the  
with the figure wherein it was and his dominatours / I haue  
founde that the operation or effecte of the said comete began  
nere to the same place where it appered / bicause it was ory-  
entall. For Prolome in the .ix. chap. aboue aledged wyterh /  
that whā the cometes be oryentall / that shortly after their  
apperyng they make their operacions. And contrary wyse  
whā they be occidentall as the comete was in that yere. xxxi.  
the .x. day of Auguste / the effecte wherof came very late / and  
for the operation of this comete shall laste longe folowyng the  
tyme of his apperyng wherfore it is to be thought that great  
terrenyll shall ensue of this than came after the other.

what operation or euyl hanvenerh by the comete.

For to wyte the operation of the comete / I consider as  
my n auctours the likenes forme and colour of the same / and  
the place of the firmament where it was conteyned. I haue  
founde that in the apperyng thereof / the colour was dyuers  
and changeable / more one nyght than another / the rayle  
greffe hath many lytell rayes / and the body small and slow

in his proper cours. Whiche folowynge the sener of a strone  
 mers is wyntessed on mercury. Howe beate that some myghte  
 say otherwise folowynge the bystory a graphes hauynge parte  
 of the coplacion of mars/ bicause the body was lytell/ some  
 tyme brenning and the tayle most drawynge vppwarde/ in such  
 wise that I fynde that this comete betokeneth gñally many  
 euyl influences/ as well in the ayre/ water/ persones/ seues/  
 trees/ frutes/ & religiō as vpon other thinges shortly begin  
 ninge and longe cōtinuynge. And yet more is to be dred/ for  
 the clips abouesaid gaue with the said comete/ his effect and  
 operacion at the very same tyme: which influence of .ij. euyls  
 in one tyme may brede many euyls/ as Barnes also confyrm  
 with & chefully that mercury in bothe .ij. hath most dominion.  
 Particulerly I fynde that this comete agreeth with the eclips  
 in many effectes/ so: by it shal happen many stronge wyndes  
 that sodenly often shal ryse/ great heat in the ayre/ yll dispos  
 sed thondre/ lightnyng/ and tempest/ and great maysons in  
 the erthe/ wherby shal come many sicknesses: as apostumes in  
 the sydes/ sore throates/ bore feuers/ pestilence/ great thestes  
 on the water and losse of shippes/ strifes amōge people with  
 in byll wyntendyng secrete sedicyon/ discensions betwene  
 cōtreys and townes/ and most amōge them selfe whiche be  
 fore were frēdes/ subtell sperited and wyse persones shal nat  
 escape without peryll of their lynes/ yonge folkes shal suffre.  
 This threteneth the estate of religyon / great persones shal  
 suffre. To wyte any more I forbere at this tyme.

### Of the eclips of the mone.

In this yere of .xxxiiij. we haue the clips of the mone  
 the begenes of .xiiij. poyntes the .iiij. day of Auguste  
 at .xi. a clocke and .xlii. mynutes before mydnyght egall/ the  
 begynnyng is at .x. a clocke / the ende betwene one and .ij. a  
 clocke after mydnyght and lasteth .iiij. houres and a halfe,

This eclipse shall nat do his effecte this yere. Whereby I wyl  
here make therof no more mencyon.

Of peas and warre.

I fynde nat that great warres shalbe in these partes / but  
some small discepcion. But the east partes shal nat be sure  
fro warre / bloodes hede and other. Howe be it in this yere  
there may be some conspiraey or distaunce amonge princes /  
lordes / and subiectes / by subryll inuencions for the yare to  
come to haue warre bicause of the same.

Of thinges increasynge on the erthe.

This yere many thinges shal be at a reasonable pryce /  
cheefly corne / beanes / peason / otes. et cetera. but frutes shal  
be greued at the blossomyng / and the first frutes shalbe dere  
ynoughe / wyne metely chepe / other thinges may chaunce to  
ryse in pryce.

Of sickenes this yere.

The disease of this yere be dyuers and meruaylous / with  
hote feuers / apostumes / fluxe of the wombe / and somtyme  
payne in the hede / more in somer than at the begynninge /  
with daunger of great maladies and derbe of some places of  
countreys : but most vpon the state of the churche / and all  
thoughe that the auctours maketh more large mencion there  
of. Neuerthelesse bicause it is odious to wyte therof I for  
bere me fro sucher thinges / specially bycause that the dispo  
sicyon draweth more vnto euill than good.

Of the foure quarters of the yere.

The thyrde foundacyon was the coniuunctions and  
apposicyons / preceedynge the entree of the sonne into Ea  
pricorne / Vries. et cetera. After Perholome wynter be  
ganne the yere past / the. xxvi. days of Nouembrie at a  
xi. a clocke with the fulle moone preceedynge the entrynge  
of the sonne in Capricornus. Whiche as I fynde by  
his domynatours / as Venus hauynge foure wyntresses in

the signe conjunctionall and the angle orientall with mercury  
shalbe in his disposicion diuers and mutable/ but more gen  
erally lesse colde than the season of the yere requirerh/ with  
diuers moistures/ rayne/ and light wyndes mouyng in the  
ayre. And in the myddell of wynter snowe with frost nat longe  
duryng/ and the ende seasonable after our regyon.

Spreyngertyme beginneth with the full mone preceedyng  
the entranche of the son into Aries/ of whom are dñatours Ju  
piter and Mars/ with mercury there hauinge parte. wherby  
it shall be somewhat modiefied and temperate/ in partie with  
small rayne and heate at the ende. Albeit as aboue is sayd it  
shall nat excede/ and specially in the ende without thonder/  
lightning and tēpest in the ayre/ which sodenly shal ryse and  
nat lōge endure. This also shewerh vs the elyps and the co  
mēte/ wherby domage may come vnto buildinges/ and some  
encreasynge of waters. Somer beginneth with the full  
mone the .vi. day of June before mydnyght as in the .ij. boke  
of Apostel. appereth. folowynge his dñatours mercury and  
mars in heate/ with many drye wyndes/ and yll temperate/  
moost parte clere. By Jupiter some sayre dayes lyke to the sea  
son. Earuest beginneth the .iij. day. of September the oppo  
sition betwene .iij. or .iiij. a clocke after none. By the dñatours  
it shalbe inconstaunte/ wyndy and moiste/ the myddes of it  
somewhat corrupt of ayre/ stynging mystes/ fogges. et cetera.  
and the ende dysposed to his nature and qualite of our regis.

Of the state of all persons after the effecte of planettes.

They vnder Saturne/as olde folkes/ melancolicus/ and  
auaricious folkes/ ierres/ folishe people. et cetera. shall do  
merely well in helth/ but they may suffre paynes in the hede.

They vnder Iupiter shall suffre in their substaūce/ dignes  
ties and possessions: of other thinges that shall happen to  
them I holde my peas. They vnder mars shalbe inclined to  
warre and debate/ but most in their conceyte and wyll/ whi  
cher they can nat fulfyll in dede/ they shall nat escape the in

aspecte eclipsall Mars beyng there. And he may  
fynde some difficulte in his children. In his counsell  
nat be stable/and shal alone many thinges without  
Of the comete I leane to wytte for some causes. et  
The countrey of fraunce shall prospere reasonably in  
and substance/hauyng lytell warres/but it shall nat  
sured fro great maladyes and discorde amonge them  
yet from the influence of the clips/and that vpon the  
of Narboine/Marcyille/Monpeller. et cetera.

Of the towne of Louayne.

The auncient towne of Louayne shall nat greatly  
in their goodes and substance/and shalbe domaged  
degrees and worshipp by the clips and comete. They  
scape metely fro longe sekens/but they shall nat be su  
sodayne maladyes.

Of the towne of Andwarpe.

Andwarpe shall nat escape withoute great and so  
maladyes by cause of the clips/and shall suffre doma  
see of shyppes/they: marchaundise shall nat prosper  
be deceytefull and fals. It shalbe well ruled but not w  
some rumour of the comens.

Of the towne of Bruxelles.

Bruxelles shall prospere wel in substance and good  
meanes of Mercury. There shall ryse a lytell dyscorde  
the comens/the ryche people shal haue payne by malad

Of the countrey of Flaunders.

Flaunders shall gouerne them selfe very wysely/b  
without discencion/and prospere metely in their subst  
and bodyes. In somer shall be hore maladyes but nat  
duryng.

Of the towne of Gaunte.

Gaunte shall behaue them selfe reasonably in the  
ynges and busynesses/but the clips is to them somwha  
peate/principally in the ende of somer.

Of the towne of Bruges.

The towne of Bruges by reason of the eclipses shall suffre  
warre/debate/or stryues /whiche by rype deliberacyon  
shally be ceased.

Of the countreys of Hollande and Zelande.

The countreys of Hollande and Zelande by reason of the  
warre are thretened to suffre domage by the see / of theys  
and shippes/and losse of their people/encrease of wa  
ter may happen/bur nat great/ and without domage  
of god. Bur they shall haue often many wyndes and  
floodes of waters: in suche wyse that the dyches shall  
be damaged.

Of the countye of Henawe.

The countye of Henawe shall prospere reasonably/inclyn  
g to warre & debate/with daungerous maladyes longe  
ing/and mooste amonge yonge folkes.

These be the inclynacions whiche I haue  
founde this yere.

rebus enim erit sibi competentes sanioribus/ licet potius erit inclinatus ad pacem q ad bellu/ q progressio ab ascendente peruenit ad terminu Iouis. Caneat pterea dolorem capitis hyachiojum et spiculatorum.

De christianissimo Francisco rege francisco huius nominis prima. Christianissimus franciscus rex franciscus/ cuius reuolutio incipit in Septembri immediate pterito/ huc annu cõperentes sancti ducet absq notabili egritudine/ habstrans quidda inclinatione ad arma ppo prima parte huius anni. Et post pma anni parte potius ad pacem ad delicias et iocunditates q ad bella. Ita annus plus fauere sibi p pace q huius immediate lapsus. Et videtur q huius sibi accider. In Vere studeat seruare pacem et iocundis inter suos marciales capitaneos et qui armis deitur. Caneat aliquã grauitate occasione mulieru/ quas purat habere adiutrices in suis rebus. Erat inuitis et ingenuosus balde ad cõgregandum pecunia/ in quibus erit fortunatus. In reb9 Mariis cõspiceret fortunabitur. In regno frãcie in hui9 anni principio bigebit aliq egritudine pchilicet cu fluxu ventris. Erant in eo regno diuersarum opinionum contrarietas.

De potentissimo ac nobilissimo rege Anglie Henrico fidei defensor. Nobilissimus ac potentissimus rex Anglie Henricus/ cuius reuolutio incipit in Junio anni pteriti/ et durabit ad Junia anni pseten ris/ dñ se habebit quo ad sanitatem corporis sine notabili saltem egritudine/ derisam in animo gaudebitur diuersis ob causis/ bñq ad terminu psetenris anni. Inde ab Junio psetenris anni ad Junia futuris erit gaudes letus et absoluetur ab multis anis dolozib9 quia progressio peruenit tunc ab Jouis cõiunctu Veneti. Maris in reuolutione in aquario in oppositione Venetiis plarice et in oppositione Iouis plarice promittunt aliquã eubatione in suo dominio leui saltem et facili. Opulitissimus regu anglie bene se habebit ppo prima anni parte cu leui et facili aliquo marum in ter cõmuni populu dei satis diuerse in rebus agendis erit opinionis inter bulg9 nobilibus et aliquib9 psetenris huius regni astra promittit non bonam sortem sed dampnum et aliquibus periculum/ q Juppiter et Saturnus aspiciunt signum huius regni malo et inimico aspectu.

De archiepiscopo colonienſi nobilissimo imperii electore. Nobilissimus archiepiscopo colonienſis natalici reuolutio incipit in Januario anni psetenris pma cõpñ emi erit sibi aliquantuler grane et suspicr/ q mercurij retrogrado ani hui9 significatio indicat cuius hospitatos est saturnus. Et durabit ista grauitas bñq ad finē februarii. Post letus et bono animo biuet cu bona corporis dispositione et animi equalitate In rebus externis in substantia et lucro astra sibi bonu pmit tunt sortem.

De illustrissimo duci Cluensi et Juliacensi potentissimo. Illustrissimus dux cluensis cuius natalici reuolutio incipit in nouembri lineidi a te pteritis. Et progressionibus diliget consideratis/ ad locis aspericis/ astra sibi promittit cõspiceret sortē et in corpore sanitate veru in rebus possessione et do minioru aliquã sustinebit difficultate aut molestia.

De ducatu Sabadie. Ducatu Sabadie in oibus susciens bene se habebit. In rebus externis substantia et lucro sortē cõpeten tē videbit. Erig diliget in cõsiliis ppo substantia et lucro. Inter bulg9 erit in rebus agendis opinioes diuerse. In futuribus prospere erunt in magnis animalibus damna/ in pugnandis periculum et difficultas et/quare diligenti se custodiant mulieres pregnantes.

De opido Lonanienſi. Oppidu Lonanienſe q Mercurij gaudet infirmitas/ aliquã difficultate videbit in reb9 suis agendis cu bono et salubri fine et potius in quatu hyemni. Ver bonu pmitit sortē cu aliquantulo difficultate. Etas et iunius gaudis q dilatare ani

De oppido antuerpienſi pfecto. Oppidu Antuerpienſe se bñ habebit in suis fecis cu diligetia et animi iustitiae picipitibus iuracibus q mercurij/ veru maris picipit suspicr habebit i dñno

Հայաստանի Հանրապետության Կառավարության որոշմամբ հաստատվում է հետևյալի մասին:

Տնտեսական զարգացման համալսարանի ղեկավար Գևորգ Գրիգորյանը ասել է, որ հիմնականում խոսքը վերաբերում է Երևանին, որտեղ ավելի քան 100 հազար մարդ է աշխատում արտադրության ոլորտում, որից 70 հազարը արտադրություն է անում արտասահմանում, իսկ մնացած 30 հազարը՝ տեղական շուկայում։

De tempore huius eclipsi principio medio et fine. quidam tam erronee et false opinatus est/ de pariter in suis pronosticis/ ista enim media huius eclipsi posuit pro principio/ et finem pro medio/ sed huius etiam dicit lunam dominam aut erat isocron huius eclipsi/ errat/ et errorem suum retroque in Ptholomeum/ quem non intelligit. Ptholomeus enim nunquam posuit luminaria/ solis aut lunae occidit/ pores eclipsi aut erimebris aut mensurarum inter lunas aut pleniluniorum solis et lune/ sed ista ostentat ad lucernam Ptholomeum legit/ nomine subrepto propter honestatem/ verum facit arabes errores ponere solis et lunae occidit/ pores. Ad propositum rediundo/ ista dispositio dabit autem aliquantulum turbulenta aliqui serena et sua/ blima quarta die. xiiii. hora. iii. m. et. ante meridiem servabit naturam plenilunii aliqui huius et postea mutatio circa. xvi. hora. x. suaves cum aliquantulum turbulente aeris dabit/ de qua huius in die sequetur. Et circa finem huius mensis dispositio ad turbationem aut/ gradum aut tempestatem.

#### ¶ November.

¶ Nova luna die prima hora quinta minutis. lvi. ante meridiem frigida humida turbida. Ultima quarta die. ix. hora. ii. minutis. lvi. ante meridiem frigida humida ventosa/mutato circa. ii. Circa. iiii. frigida humida dispositio. ix. pluuia ad sequens grandis nebula. Plena luna die. x. hora. vi. minutis. xvi. post meridiem temperata erit secundum naturam temporis aliqui ventosa aliqui clara / blima quarta die. xxi. hora. viii. minutis. x. post meridiem ventosa / et circa finem aliquos suaves dies circa naturam temporis dabit mutatio circa. xvi. et. x. ventus. xxi. aliquantulum serena. xxi. pluuia. xxi. aliquantulum serena. Plena luna die. xxi. hora. xii. minutis. xxi. post meridiem temperata/ ventus aliqui clara. Ultima quarta die. viii. hora. x. minutis. viii. post meridiem naturam plenilunii servabit mutatio circa. iiii. aut. b. circa. viii. et. xi. turbato aeris adsequente diem.

#### ¶ December.

¶ Plena luna die. x. hora. b. minutis. xxx. ante meridiem frigida humida nix et blima quarta die. xxi. hora. iiii. minutis. xvi. post meridiem naturam plenilunii servabit/mutato circa. x. nix aut frigida humiditas. x. dispositio ad tempestatem aeris. xxi. nix humiditas frigida. x. pluuia. Nova luna die. x. hora. b. minutis. lvi. post iudicium servabitur ad annum futurum.

#### ¶ De fertilitate et penuria huius anni.

¶ Omnis astrologorum una hec est sententia/ fertilitatem et anni abundantiam pro eedere Jovis et Venere/ et penuriam Saturni et Martis quia dominus habuerint in anno. Consideratis ergo considerandis in themaribus erimebris et alius et stellationibus sic annus iste debet esse copiosus fertis et natalis terre copiosus et erit. In anni huius principio vera fructus quia primo flore gaudebit circa medium Martis patitur detrimentum mala aeris qualitate aut penuria aut grandis aut nebula. Similiter etiam fructus quia circa finem Julii maturationem habebit/ temperata patitur. De iudicio sumitur et occidit/ pores erimebris themarum veris et estatis/ alius et stellationibus illo tpe occurreribus. Fructus ovis ancena et alia virtutis de potestate Jovis/ patitur in cecede et in colligendo/ si copiosus erit/ et plus estimabuntur et deficiet in pretio/ hoc Jupiter in figura erimebris

substantie et lucci. Et statim sanctam et bonam. Intumum difficiat. Caneat sed  
ligenter mulieres rā pregnantis q non pregnantis de sanitatem custodiāt & let  
nōt cū & senes nemelanrolicis grollis & feigedis humoyb; incurrat egritudine  
Et rā tamen nostris antuerpianis/me corrupto & grollis sanguine afficiantur/ica  
bie sua humoyb; apodemaribus collit et spatulach/crumi & pectoris.

¶ De oppido hygentensi.

Oppidum hygentense in hyeme aliquam viderit difficietatem et inimicitiam se  
erectam/quibus facilliter obuiabit sano & sapienti consilio/ber prosperum succer  
tum in substantia et lucro promittit/et statim sanabilem/non tamen sine egr  
tudinib; acutis/promittit etiam lucrum ab aliquib; nobilibus/aut ad auxiliato  
ribus magnos viros.

¶ De oppido mechlinsensi.

Statutus malo signum oppidi mechlinsensis respiciens granitatem aliquam  
promittit illi/veritatem fraxem nobilitum et magnorum viroꝝ cum lucro sub  
stantie precipit plus quā anno immediate pæterito. In rebus honoris astra sibi  
fauebunt/Donnā in animalib; magni in Vere et in principio estatis habebit.

¶ De comitatu flandrie.

Comitatus flandrie in hyeme bene se habebit in suis negociis. In rebus tamē  
agendis diuersarum opinionum aut sententiarum inter vulgum viderit. Vos  
gaudium promittit/non tamen sine rinoꝝ belli aut damni. Vobis se non nulli  
peregrinationibus et iterib; longinquis cū fauore auxiliatoꝝ magnos viro  
rā/seppe metentia. In aeterno timeat dānā ab arte inferdā.

¶ De oppido Gandacensi.

Oppidū Gandacense in hyeme in suis factis laudabitur et honorabitur. In vere  
aliquam difficultatē occasione amicorū/aut dānā in bonis externis substantie et  
lucris aut aliquam infirmitatē habebit. Etiam laugabilis et lucra & gaudia pro  
mittit. Aurā cōpetentē habebit.

¶ De oppido hygenti.

Oppidū hygentie sapienter se reget in omnibus suis factis cū gaudiis & lucro. In  
vere inimicitia aliqua percipiet aut dānā pariteris eci/quibus sapienter posset  
resistere parā aduerit. Etiam etiam sibi fauorabilis/et gaudebit amicis auxi  
liatoꝝ principib; & magnos viroꝝ. Intumum bonus erit.

¶ De comitatu hollandie.

Comitatus hollandie satis felicē agnū viderit suspicabitur de dāno martiali  
sine causa aut periculo pper inimicoꝝ suoz debilitatē/in fructib; & terre nasc  
ribus augmētū & bonū sortem habebit.

¶ De comitatu hānonie.

Comitatus hānonie timebit marem & martialia dāna sine forsan causa aut pe  
tusulo/pemū sumitur ab malo aspectū maris ad signū huius comitatus/secun  
dum sūtur e debilitate maris in illo respectum. In fructib; & terre nascitibus  
dānā parā/verum cōpetenter prosperabitur. Eunt pterea huius ducatus mi  
litēs animos viriles & audaces cōtra suos inimicos.

¶ De paria leodiensis & comitatu lossensi.

Paria leodiensis & comitatus lossensis. In suis fructibus multiplici cōmodū  
& lucra percipiet sine bello & lre etis. sine aliqua turbatōe nisi forā in vere q  
talē astra sulcitate.

Hec sunt que pro presenti sunt & de rebus astra/que inclinationis & nō necessi  
tatis diu habet precipue in his q pertainēt ad bonā & omniacrum nostrorum nos  
sumus hominū.
